

The idea was to read documents automatically thanks to new *Artificial Intelligence* algorithms.

About OCR (Optical Character Recognition)

OCR is a very complex problem and requires very sophisticated technologies.

tion, I cut out “trigger” foods—many experts believe nuts, chocolate and aged cheese, among other edibles, act as mi-

cheese, among other edibles.

- Broken, touching, defaced characters
- Complex layout with pictures and graphics
- A myriad of possibilities

- Imaging + linguistics + Neural network
- Artificial Intelligence
- Self-Learning OCR

The dreamer came back to look for a job. He was stern with himself. “A man must suffer,” he said.

He was stern with himself.

The success comes if *customers* adopt the *technology* and if a good *market share* is secured
